Hospital, İstanbul

DEPARTMENT
Ophthalmology

CLINICAL FOCUS

A large part of Dr. Turhan's practice concerns the front of the eye. She evaluates and treats cataract, including smart lens procedures, and manages keratoconus, corneal transplantation and astigmatism. Her research interest in corneal nerve imaging and corneal crosslinking is closely connected to this area of care.

In neuro-ophthalmology, Dr. Turhan assesses visual symptoms that may be related to the optic nerve, the visual pathways or neurological disease, including ocular migraine. Her pediatric ophthalmology work includes the evaluation of children's eye conditions and amblyopia.
