Cardiology Department

CLINICAL FOCUS

A large part of Dr. Değer's work involves coronary artery disease, ischemic heart disease and atherosclerosis. He evaluates patients with chest symptoms or known coronary narrowing, interprets angiography findings and, where appropriate, performs percutaneous coronary intervention to open narrowed vessels.

Dr. Değer also follows patients with heart failure and heart valve disease, using echocardiography to examine cardiac structure and function. For patients with arrhythmias, including atrial fibrillation, he uses Holter rhythm monitoring to record the heart rhythm over an extended period, and he provides ongoing care for patients who have...
