CLINICAL FOCUS

A central part of Dr. Korkmaz's practice is intensive care treatment. This involves the close monitoring and support of patients whose condition is critical or unstable, for example after major surgery, during severe infection or when one or more organ systems need temporary support.

Dr. Korkmaz also has clinical interest in advanced life support, the structured management of life-threatening emergencies such as cardiac or respiratory arrest, and in palliative care. Palliative care in the intensive care setting focuses on relieving pain and other distressing symptoms and on supporting patients and families when a serious illness cannot be cured.

INTERNATIONAL PATIENTS

Dr. Korkmaz consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Because his work often concerns patients who are already seriously ill, the Acibadem international patient team coordinates the collection of prior reports and imaging in advance, for example MRI, CT, X-ray or ultrasound reports, laboratory and pathology results,...
