DEPARTMENT
Radiology

CLINICAL FOCUS

Dr. Gelmez performs and interprets diagnostic ultrasound examinations, including Doppler ultrasound studies, which are used to assess blood flow in vessels and organs. He interprets computed tomography and magnetic resonance imaging studies and evaluates chest X-rays.

His areas of expertise also include musculoskeletal imaging of bones, joints and soft tissues; abdominal imaging; and neuroradiology imaging of the brain and spine. In breast imaging, he works with mammography and related imaging methods. When a tissue sample is needed to clarify an imaging finding, Dr. Gelmez performs ultrasound-guided biopsy, in which real-time ultrasound is used to direct the needle to the area of concern.

Chest X-ray evaluation

INTERNATIONAL PATIENTS

International patients seen by Dr. Gelmez are supported by the Acibadem international patient team, which coordinates the collection of prior reports and imaging, such as MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries. The team also arranges appointments and organises the hospital visit.
