CLINICAL FOCUS

Dr. Selvi's clinical work centers on diabetes mellitus. In this area, his role as an internist involves reviewing a patient's history, current medication and existing laboratory results, assessing how the condition is being managed, and discussing the available options with the patient.

His second listed area of expertise is metabolic syndrome, a combination of related metabolic findings that is evaluated as a whole rather than as isolated results. Dr. Selvi's approach is to look at the patient's overall picture, including previous test results and treatments, before discussing which steps may be appropriate.

Metabolic syndrome

INTERNATIONAL PATIENTS

Dr. Selvi speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. For patients coming from abroad, the Acibadem international patient team coordinates the collection of prior reports and imaging, arranges appointments and organises the hospital visit.
