CLINICAL FOCUS

A substantial part of Dr. Terzioğlu's practice is devoted to endodontics, the branch of dentistry concerned with the dental pulp and the tissues around the root of the tooth. She assesses patients with dental pain and root canal infection and performs root canal treatment where indicated.

Dr. Terzioğlu also manages cracked tooth syndrome, a condition in which an incomplete crack in a tooth causes pain, particularly on biting, and can be difficult to identify on routine examination. She treats tooth fractures and enamel loss, restoring the affected teeth with dental fillings or with porcelain inlays and onlays, depending on the extent of the damage.

Internal bleaching of root canal-treated teeth

Cracked tooth syndrome

Root canal retreatment

Dental pain

Tooth fractures and enamel loss

INTERNATIONAL PATIENTS

Dr. Terzioğlu consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-rays, previous treatment records and any relevant laboratory results, and arranges appointments and the hospital visit.

CONDITIONS TREATED

Cracked tooth syndrome

Dental pain
