CLINICAL FOCUS

Dr. Farrokhnia's work centers on diagnostic imaging. She performs ultrasound imaging, a modality that uses sound waves rather than ionizing radiation and is commonly used to examine soft tissues and organs. She also performs mammography, the X-ray-based examination of breast tissue, which is used in both screening and the further assessment of breast findings.

Her expertise also includes computed tomography (CT) and magnetic resonance imaging (MRI). CT combines X-ray data into cross-sectional images and is frequently used when detailed anatomical information is required, while MRI uses magnetic fields and radio waves to image soft tissue without ionizing radiation.

INTERNATIONAL PATIENTS

Dr. Farrokhnia consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments and the...
