CLINICAL FOCUS

A significant part of Dr. Ertekin's practice involves patients with tooth root inflammation and tooth root infection. These conditions can cause pain, sensitivity or swelling, and they are assessed through a clinical examination and, where appropriate, dental imaging in order to identify the affected tooth and the extent of the problem.

Dr. Ertekin also carries out dental fillings and tooth extraction. Fillings are used to restore teeth affected by decay or damage, and the choice of technique and material is discussed with the patient beforehand. Tooth extraction is considered when a tooth cannot reasonably be preserved, and patients are informed about the procedure, the expected recovery and the care needed afterwards.

INTERNATIONAL PATIENTS

Dr. Ertekin consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as X-ray reports, previous dental records, laboratory results, operative notes and discharge summaries, and arranges appointments and the hospital visit...
