CLINICAL FOCUS

Dr. Usta's clinical work centers on the diagnosis and follow-up of heart disease in children. A large part of this involves congenital heart diseases, that is, structural heart conditions present from birth, which may be identified in infancy or later in childhood and often require long-term monitoring.

Her practice further includes the evaluation of children with heart failure, where the heart does not pump effectively enough to meet the body's needs, and of arrhythmias, or disturbances of the heart's rhythm.
