CLINICAL FOCUS

A significant part of Dr. Candan's work involves patients with pneumothorax, a condition in which air collects in the space around the lung. Assessment usually begins with a review of the patient's history and chest imaging, after which the possible approaches, including surgical options where they are considered appropriate, are...

Dr. Candan also evaluates and operates on patients with lung cancer and other thoracic cancers. In this setting, existing imaging, pathology results and any previous treatment are reviewed to determine whether a surgical approach is suitable and, if so, what form it may take.
