DEPARTMENT
Pediatrics

CLINICAL FOCUS

Dr. Diri's practice covers general child and adolescent health from the newborn period onward. In the first weeks and months of life, she follows newborns and assesses common concerns such as newborn jaundice, infant colic and gas pain in infants.

She also diagnoses and treats childhood infectious diseases and upper respiratory tract illnesses in children. Where a child's findings suggest a condition that falls outside general pediatrics, Dr. Diri can help families understand the next steps in assessment.
