Ophthalmology

CLINICAL FOCUS

Dr. Birgül's clinical work covers conditions affecting the front and back of the eye. He assesses and treats cataract, glaucoma and uveitis, as well as surface conditions such as conjunctivitis.

He also manages refractive errors, including myopia, hyperopia and astigmatism, and he sees children with paediatric eye conditions. For glaucoma and other chronic conditions, follow-up over time is often part of care, and the appropriate approach is discussed with the patient after assessment.
