Acibadem Atasehir Hospital, İstanbul

DEPARTMENT
Radiology

CLINICAL FOCUS

A central part of Dr. Kahraman's work is the imaging of breast diseases. This typically involves mammography and ultrasonographic imaging, which may be used alone or in combination depending on the clinical question, the patient's age and the characteristics of the breast tissue.

In radiology, the value of an examination depends on careful interpretation as well as on image acquisition. Dr. Kahraman evaluates imaging findings in relation to the patient's history, symptoms and any previous examinations, and prepares a written report for the treating team.

INTERNATIONAL PATIENTS

Dr. Kahraman consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, arranges appointments and organises...
