CLINICAL FOCUS

Dr. Ertürk's surgical practice covers a range of abdominal wall, gastrointestinal and endocrine conditions. He treats inguinal hernia and manages small bowel cancer, a diagnosis that is reflected in several of his published case reports on small bowel obstruction and intestinal tumors.

He also performs thyroid surgery for patients whose thyroid conditions require an operation, and his areas of expertise include kidney transplantation. In each of these areas, the choice of treatment depends on the individual patient's findings, and options are discussed after the clinical picture has been reviewed.
