CLINICAL FOCUS

Dr. Önder's area of expertise is orthodontic care. Orthodontics is the branch of dentistry concerned with the position of the teeth and the relationship between the upper and lower jaws. In practice, this begins with a careful orthodontic assessment: a clinical examination of the teeth, bite and facial structures, together with a review of any available dental imaging. On this basis, Dr.

Because orthodontic care usually extends over a period of time and involves regular follow-up, treatment planning includes a conversation about the practical aspects of care, such as the expected sequence of visits and what the patient can do at home to support the process. For patients who travel for treatment, this planning is adapted to their circumstances where possible. Dr.

Orthodontic care

INTERNATIONAL PATIENTS

Dr. Önder speaks Turkish and English, and interpreters can be arranged for patients who prefer another language. Before a visit, the hospital's international patient team coordinates the collection of prior reports and imaging, such as dental X-rays, CT reports, previous treatment records and discharge summaries, arranges appointments and organizes the hospital visit.
