CLINICAL FOCUS

The areas of expertise named for Dr. Parlakkılıç are breast diseases, mammography and ultrasound imaging. In breast radiology, mammography is an X-ray-based examination of the breast tissue that is used in the evaluation of breast conditions.

Imaging results are read in the context of the patient's history, symptoms and any earlier studies. When previous mammograms or ultrasound examinations exist, comparing them with current images is an ordinary part of the radiological assessment, which is why prior reports and image files are useful for a review.

INTERNATIONAL PATIENTS

Dr. Parlakkılıç speaks Turkish and English, and interpreters can be arranged for patients who prefer another language. For patients coming from abroad, the Acibadem international patient team coordinates the collection of prior reports and imaging, for example MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries.
