CLINICAL FOCUS

Dr. Tire's clinical practice centers on diseases of the blood vessels. He treats venous insufficiency and varicose veins, conditions in which the veins of the legs do not return blood to the heart efficiently and which may cause symptoms such as swelling, discomfort or visible enlarged veins.

Within vascular surgery, the choice of treatment depends on the individual patient, the location and extent of the disease, and general health. Depending on the case, treatment planning for vascular disease may involve open or endovascular surgery, and some patients may be advised to continue with observation or medical management rather...
