General Surgery

CLINICAL FOCUS

A large part of Dr. Tokat's practice concerns conditions of the liver, pancreas and biliary tract. He evaluates and treats patients with liver diseases, including fatty liver disease and liver failure, as well as liver cancer, where surgical treatment is considered as one part of the overall oncological plan.

Dr. Tokat also sees patients with inflammatory bowel disease, covering both Crohn's disease treatment and ulcerative colitis treatment. In these conditions, the decision between continued medical management and surgery depends on the course of the disease, the findings of imaging and other investigations, and the patient's response to previous treatment, and each case is assessed on its own merits.

INTERNATIONAL PATIENTS

Dr. Tokat consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior medical reports and imaging, arranges appointments and organizes the hospital visit.
