CLINICAL FOCUS

The main area of Dr. Çakmakçı's practice is restorative dentistry, which is concerned with preserving and restoring the structure and function of teeth that have been affected by disease, wear or damage. Her approach follows her postgraduate training in Restorative Dental Treatment, and the aim of care is to protect the existing tooth structure wherever this is clinically appropriate and to restore comfortable, functional use...

A second part of her work is dental treatment planning. This involves assessing the patient's current oral health, reviewing any previous dental work and existing imaging, and setting out the steps of care in a clear order. Dr. Çakmakçı explains the findings and the planned care to the patient so that the reasons for each step are understood, and the plan can be revised as the clinical picture develops.

Dental treatment planning

INTERNATIONAL PATIENTS

Dr. Çakmakçı consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before the visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as dental X-ray reports, previous treatment records and any relevant laboratory results, and arranges appointments and the hospital visit.
