CLINICAL FOCUS

Dr. Baykal's clinical work centers on thyroid diseases and their treatment. Within Internal Medicine, thyroid disorders are assessed through a review of the patient's history and symptoms, a clinical examination and existing laboratory and imaging findings, followed by a discussion of treatment options suited to the individual case.

His second area of expertise is obesity. As an Internal Medicine specialist, he approaches obesity in the context of a patient's overall health, taking into account related metabolic factors identified during assessment.
