DEPARTMENT
Radiology

CLINICAL FOCUS

Dr. Başar's practice covers three main imaging methods. Magnetic resonance imaging (MRI) uses a magnetic field and radio waves rather than ionizing radiation and is often requested when detailed images of soft tissues are needed. Computed tomography (CT) uses X-rays to produce cross-sectional images of the body and is frequently used when a rapid or detailed assessment of bone, chest, abdominal or vascular structures is...

In each case, the choice of imaging method depends on the clinical question asked by the referring physician, the patient's history and any previous examinations. Dr. Başar's role is to perform or supervise the examination as appropriate, interpret the images and prepare a report that describes the findings in a way that supports the diagnostic pathway.

Magnetic Resonance Imaging (MRI)

Computed Tomography (CT)

Ultrasound Imaging

INTERNATIONAL PATIENTS

Dr. Başar speaks Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the international patient team coordinates the collection of prior reports and imaging, such as earlier MRI, CT, X-ray or ultrasound reports, laboratory and pathology results, operative notes and discharge summaries, and arranges appointments and the hospital...
