DEPARTMENT
Ophthalmology

CLINICAL FOCUS

A substantial part of Dr. Tasalı's work concerns the retina. She assesses and manages retinal diseases, including macular degeneration, retinopathy, and retinal detachment and retinal tears. Uveitis, an inflammatory condition affecting the inner structures of the eye, is also among her areas of expertise.

Dr. Tasalı also sees patients with conditions affecting the front of the eye and the lens. These include cataract, keratoconus, and conjunctivitis. Her expertise further extends to refractive errors such as myopia and hyperopia, and to amblyopia, a condition in which vision in one eye does not develop normally.
