CLINICAL FOCUS

Prosthetic dental treatment concerns the restoration or replacement of damaged or missing teeth. Dr. Arkan's doctoral training in prosthetic dentistry underpins her clinical work in this area. Her approach gives attention to each patient's individual dental rehabilitation needs, taking into account the condition of the remaining teeth and supporting tissues as well as the patient's functional and aesthetic expectations.

Dental rehabilitation may involve a single restoration or a broader, staged plan that addresses several teeth over time. Related treatment pages on this site include E-Max Crowns, Laminate Veneers, Composite Bonding and Full Mouth Reconstruction.

INTERNATIONAL PATIENTS

Dr. Arkan consults in Turkish and English, and interpreters can be arranged for patients who speak other languages. Before a visit, the Acibadem international patient team coordinates the collection of prior reports and imaging, such as X-ray or CT reports, laboratory results, operative notes and discharge summaries, and arranges appointments and the hospital visit itself.
